FiberRing Restraint Systems for Gemini® and ProChem® Tanks

FIBERRING RESTRAINT SYSTEMS | FIBERRING RESTRAINT SYSTEMS | FIBERRING RESTRAINT SYSTEMS | FIBERRING RESTRAINT SYSTE

FiberRing is a non-metallic hold down (restraint) system for Gemini® and ProChem® Tanks from 5 gallons to 1500 gallons. This all fiberglass restraint system features an open cylinder with an integral 4" wide rim at the base. The cylinder height is typically half the height of the tank wall.

The FiberRing restraint unit is like a very large "cup holder". The tank sits securely inside the cylinder and can be bolted to the ground by drilling holes into the integral rim flange. (4) Holes are adequate for most tanks. The FiberRing is a great option for securing your tanks in seismic as well as marine and other high-demand tank installations.

Each FiberRing includes a pre-drilled base flange to allow bolting to a foundation or deck (bolts not included). Since they are all fiberglass, they are very easy to drill onsite. FiberRing can be provided with any new Gemini® or ProChem® tank or ordered as an accessory for Gemini® or ProChem® tanks you already have in the field. Seismic Engineering calculations available at additional cost.

We manufacture (2) models:

- Non-code system that has approx. ¼" wall thickness.
- Code (IBC compliant) model that is slightly thicker and can be provided with certified "wet stamped" calcs for any state. If you require a "code" FiberRing, please specify ahead of time. Our standard non-code system may not be compliant in every application.
